

ABSTRACT OF THE DISCLOSURE

An improved dome shaped trap for bathroom, kitchen or other sink comprising a dome shaped trap, threadably attached to a cover. The cover comprises a vertical
255 conduit adapted to receive the existing vertical influent drain from the sink, a horizontal conduit adapted to be attached to the existing effluent exit drain, the vertical conduit extending down below the water line, providing an extension for the existing influent drain, making the trap easily adjustable to be installed any existing sink. The dome trap is easily removable by hand, by unscrewing it from the cover, to clean out any debris
260 clogging the line or to retrieve any item inadvertently dropped into the sink and down the drain into the dome trap.
